1		I just <i>love</i> looking for birds. There are so many different kinds of birds living around us.	
2		Each bird looks and sounds different, and even has a different kind of nest!	
3		Listen - do you hear all the different bird songs?	
4		Ooh, I think I found a nest! We shouldn't touch nests, but it's so fun to observe them.	
5		Tap on the nest to take a closer look with the binoculars.	
6		Now we can see things that are far away much better!	
7		Try dragging like this to look around.	

8		Use the slider to zoom in closer.	
9		Wow! This nest looks so interesting!	
10		Tap the green button so we can learn more about it in our Bird Guide!	
11		This is a Robin.	
12		You've spotted this bird [one] [time] and earned your first badge! Woo hoo!	
13		The robin builds her nest so that she has a safe place to lay her eggs. I wonder what color and size her eggs will be?	
14		Tap here to add the Robin to your bird guide.	
15		Now we've observed the Robin's nest, so let's record it in our bird guide.	

16		Tap on the nest to learn what it's made of!	
17		Let's use the magnifying glass to take a closer look.	
18		Robins make their nest by pressing dry grass and twigs into a bowl shape.	

19		Tap here when you are finished.	
20		Tap here to return to the bird guide.	
21		Let's go make more observations!	
22		Tap here to close the bird guide.	
23		Tap anywhere to walk around.	

24		Or you can use these arrows.	
25		Let's explore and see what we discover!	
26		There's so much to see.	
27		What's over there?	
28		I think I hear something.What do you hear?	
29		I think I spot a nest!	
30		Let's take a closer look.	
31		Tap on a nest to look through the binoculars.	
32		Use the slider to zoom in.	
33		Tap the green button to continue.	

34		This nest is empty right now. I wonder who made it? Let's come back later to see if we can spot it!	

35		Let's go find a nest with birds in it!	
36		Ooh we found a bird! Let's figure out what kind it is!	
37		Ooh we found a bird!	
38		It's an American Robin!	
39		It's a Black Capped Chickadee!	
40		It's a Cliff Swallow!	
41		It's a Carolina Wren!	

42		It's an Eastern Phoebe!	
43		It's a Marsh Wren!	
44		It's a Baltimore Oriole!	
45		It's a Brown Headed Nuthatch!	
46		It's a Hummingbird!	
47		You've spotted this bird once	
48		You've spotted this bird twice	
49		You've spotted this bird [] times	
50		three	

51		four	
52		Five	
53		over five	
54		over ten	
55		You've spotted this bird soooo many times! You are quite the bird watcher!!	
56		Great job!	
57		This bird isn't seen very much. Lucky you!	
58		This is a bird we see a lot around here!	
59		Ooh, this bird isn't always around, but you got to see it! Lucky you!	

60		Tap here to add this bird to your Bird Guide.	
61		We spotted this bird in its nest. Let's check it off.	
62		Tap on the nest to learn about it.	
63		Nests are where birds lay their eggs and raise their babies	
64		This nest looks so interesting. We need more observations!	
65		Let's come back to this nest later to see if there are any eggs to observe!	
67		Chickadees love these bird boxes! They make a nest inside using things like twigs and moss.	
68		Cliff swallows use mud to make their nests! They form it into the shape of a bowl.	

69		Carolina Wrens make nests out of different materials they find, like dry grass, feathers, string and even plastic.	
70		Eastern phoebes love to build nests under overhangs like roofs. They make them from mud, moss, leaves and even animal hair.	
71		Marsh Wrens make their nests from dry grass. They build them in plants growing up out of marshland. So cool!	
72		Baltimore Orioles make hanging nests that look like baskets! They're made from things like grass, bark, wool and even horse hair.	
73		These Nuthatches live in holes in trees. Inside, they add feathers, cotton and bark to make a nest.	
74		These hummingbird nests are very very small! They are made from spiders' webs, bits of plants and feathers.	
75		Oh look, eggs!	

76		Oh look, hatching eggs!	
77		We have spotted this bird's eggs. Let's record that in our bird guide.	
78		Tap on the eggs to learn about them.	
79		Eggs come in all different sizes and colors.	
80		The pattern of these eggs is so interesting. We need more observations!	
81		We can come back later and see if these eggs are ready to hatch.	
82		We can come back later and see if these eggs have hatched.	
83	(read with wonder)	I see the robin's eggs are small, pale blue and sooo pretty! Have you ever seen something this color before?	

84	(read with wonder)	I see the chickadee's eggs are very small, and white with lots of small red dots. What do you notice?	
85	(read with wonder)	I see the cliff swallow's eggs are white with brown spots. What do you notice about their shape?	
86	(read with wonder)	I see the Carolina Wrens eggs are covered in little pink spots! What else do you notice about them?	
87	(read with wonder)	I see the Eastern Phoebe's eggs are white but sometimes have spots. What do you notice about their shape?	
88	(read with wonder)	I see the Marsh Wren's eggs are brown and spotted, and are very small. What do you notice?	
89	(read with wonder)	I see the Baltimore Oriole's eggs have dark swirls all over them. Does this look like anything you've ever seen before?	
90	(read with wonder)	I see the Nuthatch's eggs are covered in little brown spots. What do you notice?	

91	(read with wonder)	I see the Hummingbirds eggs are soooo tiny. What do you notice?	
92		Oh look, little baby chicks!	
93		We have spotted this bird's hatchlings. Let's record it!	
94		Tap on the hatchlings to learn about them.	
95		Really young chicks that have just hatched from their eggs are called 'hatchlings'.	
96		We can come back later and see how they have grown!	
97		Oh wow! Look at the hatchlings chirp-chirp-chirp! They are waiting for food!	
98		Awwww it's a fluffy Fledgling!	

99		We have spotted this bird's fledglings. Fledglings are young birds. Let's check it off!	
100		Tap on the fledgling to learn about it.	
101		When chicks are old enough to leave the nest and fly they're called 'fledglings'.	
102		Let's go spot some more birds!	
103	American Robin	This fledgling looks similar to the grown up bird. I notice the it has more spots on it's feathers than its mom	
104	Black Capped Chickadee / Eastern Phoebe / Marsh Wren	This fledgling looks a lot like its parents - just a little more fluffy!	
105	Cliff Swallow / Brown Headed	This fledgling is fluffier than its parents. Its colors will get even brighter as it grows.	

	Nuthatch / Baltimore Oriole / Anna's Hummingbird		
106	Carolina Wren	This young bird looks a lot like its parents!	
107		Oh look, a bird!	
108		Tap on the bird to learn about it.	
109	Robin	The daddy Robin has an orange colored chest, black head and yellow beak.	
110	Black Capped Chickadee	This birdy looks like it has a black cap on its head. That's why it's called a Black Capped Chickadee. (giggle)	
111	Cliff Swallow	I notice so many colors! This bird has a shiny blue back, red face, and a white patch on its forehead. What colors do you see?	
112	Carolina Wren	I see this bird is reddish brown with a white stripe over its	

		eye. What do you see?	
113	Eastern Phoebe	The Eastern Phoebe is a greyish brown with a white tummy.	
114	Marsh Wren	This bird has black and white streaks on brown feathers. But its tail that pokes up is what really helped me notice it!	
115	Baltimore Oriole	This oriole has bright orange feathers! This makes it easier to spot!	
116	Brown-headed nuthatch	The nuthatch is a small gray, brown, and white bird with a short tail.	
117	Anna's Hummingbird	Wow, this bird is teeny-tiny and so colourful!	
118		Tap here to learn what this bird eats.	
119		Oh look, a bird is feeding!	
120		We have spotted this bird feeding. Let's check it off.	

121		Tap on the feeding bird to learn about it.	
122		Robins eat a lot of different foods, including worms, insects and berries.	
123		Chickadees like to eat insects, seeds, nuts and fruit.	
124		Cliff swallows eat flying insects, like flies, bees, wasps and beetles.	
125		Carolina Wrens eat insects and spiders.	
126		The Eastern Phoebe eats flying insects, like wasps, dragonflies and moths.	
127		The Marsh Wren eats spiders and insects it finds in plants near the water.	
128		This Oriole eats insects in the summer time, and in the spring and fall they like to eat fruit and sweet nectar.	

129		The Brown-Headed Nuthatch eats spiders and insects.	
130		These tiny birds use their long tongues to drink nectar from flowering plants.	
131		Let's check it off!	
132		We can add this to our Bird Guide	
133		Add that to the Bird Guide!
